

EXPERIMENT 19

Create a SQL storage service and perform a basic query using any Public Cloud Service Provider (Azure/GCP/AWS) to demonstrate Database as a Service (DaaS)

Click on SQL databases

Click on create

Fill the requirements and choose any id

The screenshot shows the 'Create SQL Database Server' wizard in the Azure portal. The 'Authentication' section is active, showing options for 'Use Microsoft Entra', 'Use both SQL and Microsoft Entra', and 'Use SQL authentication'. The 'Set Microsoft Entra admin' section is set to 'Not Selected'. A modal window titled 'Microsoft Entra ID' is open, displaying a list of enterprise applications. The 'Azure Advisor' application is selected, with its ID 'c39c9bac-9d1f-4dfb-aa29-27f6365e5cb7' displayed in the 'Selected item (1)' pane on the right.

Name	Type	Details
AAD Request Verification Service...	Enterprise ap...	c728155f-7b2a-4502-a08b-b8a9b269319
AzNet Security Guard	Enterprise ap...	38808189-fa7a-4d8a-807f-eba01edacca6
Azure Advisor	Enterprise ap...	c39c9bac-9d1f-4dfb-aa29-27f6365e5cb7
Azure Bastion	Enterprise ap...	79d7fb34-4bef-4417-8184-f713af7a679

Azure Data Warehouse Polybase	Enterprise ap...	0130cc9f-7ac5-4026-bd5f-80a08a54e6d9
Azure DNS	Enterprise ap...	19947cfd-0303-466c-ac3c-fcc19a7a1570

Click on next

The screenshot shows the 'Create SQL Database' configuration page. The 'Production' option is selected. A note indicates that default settings are provided for Production workloads. The 'Compute + storage' section shows 'General Purpose' (Standard-series (Gen5), 2 vCores, 32 GB storage, zone redundant disabled) and a link to 'Configure database'. The 'Backup storage redundancy' section shows 'Geo-redundant backup storage' selected. A warning message states: 'Selected value for backup storage redundancy is Geo-redundant backup storage. Database backups will be geo-replicated which might impact your data residency requirements. Learn more.' The 'Next: Networking >' button is visible at the bottom.

Configure network access and connectivity for your server. The configuration selected below will apply to the selected server 'swetha' and all databases it manages. [Learn more](#)

Network connectivity

Choose an option for configuring connectivity to your server via public endpoint or private endpoint. Choosing no access creates with defaults and you can configure connection method after server creation. [Learn more](#)

Connectivity method

☒ No access

☐ Public endpoint

☐ Private endpoint

Connection policy

Configure how clients communicate with your SQL database server. [Learn more](#)

Connection policy

☒ Default - Uses Redirect policy for all client connections originating inside of Azure (except Private Endpoint connections) and Proxy for all client connections originating outside Azure

☐ Proxy - All connections are proxied via the Azure SQL Database gateways

☐ Redirect - Clients establish connections directly to the node hosting the database

Encrypted connections

[Configure identities](#)

Transparent data encryption key management

Transparent data encryption encrypts your databases, backups, and logs at rest without any changes to your application. To enable encryption, go to each database. Database level settings if enabled, will override the server level setting. [Learn more](#)

Always encrypted

Always encrypted is a family of industry-leading data protection features that provide a separation between those who own the data and can view it, and those who manage the data but should have no access, on-premises database administrators, cloud database operators, or other high-privileged but unauthorized users. [Learn more](#)

Customize additional configuration parameters including collation & sample data.

Data source

Start with a blank database, restore from a backup or select sample data to populate your new database.

Use existing data *

None Backup Sample

Database collation

Database collation defines the rules that sort and compare data, and cannot be changed after database creation. The default database collation is SQL_Latin1_General_CP1_CI_AS. [Learn more](#)

Collation *

SQL_Latin1_General_CP1_CI_AS

Find a collation

Maintenance window

Select a preferred maintenance window from the drop down. Please note, during a maintenance event, Azure SQL Database are fully available and accessible but some of the maintenance updates require a failover as Azure takes SQL DB instances offline for a short time to apply the maintenance updates. If the database is part of elastic pool, the maintenance configuration of elastic pool will be applied. [Learn more](#)
